Subtype	Distribution	Natural polymorphism	Reported evidence
1l	Cameroon and central Africa	Q30R, often with L31M	ledipasvir EC50 raised 18-fold
1e, 1g	Sub-Saharan Africa	natural NS5A RAS	SOF/VEL failure reported in 1e
3b	China and Southeast Asia	A30K + L31M; 94% of 3b in China	only pibrentasvir retained activity
3g	India	A30K + L31M	as for 3b
4r	Rwanda and central Africa	L28M/V, L30A, L31M, Y93H	raised ledipasvir EC50; failures reported
4b	Africa	reported, variable	flagged as carrying resistance risk
6u, 6v	Southeast Asia	NS5A domain I residues	DCV and LDV ineffective, EC50 239-321 nM
6b, 6f, 6r	East and Southeast Asia	L28A/L28T + R30S; L28T + L31I	6a replicon: resistant to all four NS5A drugs
6c, 6n	Mainland Southeast Asia	not systematically characterised	no phenotypic data located
GT7, GT8	India; central Africa	not characterised	never assessed in a clinical trial
